

Quad Buffer/Line Driver: 3-state

# CJ74HC/HCT125 Logic

## 1 Introduction

The CJ74HC/HCT125 is a quad buffer/line driver with 3-state outputs controlled by the output enable inputs (/nOE). A HIGH on /nOE causes the outputs to assume a high-impedance OFF-state. Inputs include clamp diodes. This enables the use of current limiting resistors to interface inputs to voltages in excess of V<sub>cc</sub>.

## 8 Detailed Description

### 8.1 Overview

The CJ74HC/HCT125 is a quad buffer/line driver with 3-state outputs controlled by the output enable inputs (/nOE). A HIGH on /nOE causes the outputs to assume a high-impedance OFF-state. Inputs include clamp diodes. This enables the use of current limiting resistors to interface inputs to voltages in excess of V<sub>CC</sub>.
