Single Supply Translating Buffer/Line Driver; 3-state

CJ74LV1T125 Logic

1 Introduction

The CJ74LV1T125 is a single, level translating buffer/line driver with 3-state output. The low threshold inputs support 1.8V input logic at V_{CC}=3.3V and can be used in 1.8V to 3.3V level up translation. In addition, the 5V tolerant input pins enable down translation (3.3V to 2.5V output at V_{CC}=2.5V). The 3-state output is controlled by the output enable input (/OE). A HIGH-level at /OE causes the output to assume a high-impedance OFF-state. The output level is referenced to the supply voltage and supports 1.8V, 2.5V, 3.3V and 5.0V CMOS levels. The wide V_{CC} range permits the generation of output levels to connect to controllers or processors.

8 Detailed Description

8.1 Overview

The CJ74LV1T125 is a single, level translating buffer/line driver with 3-state output. The low threshold inputs support 1.8V input logic at V_{CC}=3.3V and can be used in 1.8V to 3.3V level up translation. In addition, the 5V tolerant input pins enable down translation (3.3V to 2.5V output at V_{CC}=2.5V). The 3-state output is controlled by the output enable input (/OE). A HIGH-level at /OE causes the output to assume a high-impedance OFF-state. The output level is referenced to the supply voltage and supports 1.8V, 2.5V, 3.3V and 5.0V CMOS levels. The wide V_{CC} range permits the generation of output levels to connect to controllers or processors.
